

My name is Dallas Picolet and I raise and fatten cattle on oats. The oats lower the animals cholesterol and change the omega 6 / omega 3 ratio to a 3.17/1 ratio. We all want our children to eat healthier and this is one way to provide the best beef possible. We are interested in the farm to school program. We believe that this is a perfect opportunity for us to explain the benefits of our hormone free, locally raised beef. I would be willing to show anyone and everyone interested in how to cook and tenderize cheaper cuts of beef. It might also be a great project for the journalism class to make informational videos of how to cook different cuts of our beef. As you can see, I am completely open to all possibilities and look forward to working with all school districts interested. Please check out our website and see what we have to offer @ <https://oatiebeef.com/>

I am happy to answer any questions that you might have. I appreciate your time.
